

DSP

Light indicator showing on an electronic screen the status of the safety locks at the vehicle doors one

LOCKING DOOR PINS MONITOR

For security reasons, it is important to know if the door locks are locked in the vehicle.

Locked Door Pin

Unlocked Door Pin

Risk situation

The vehicle's structure with its corresponding doors pops up on the screen; the indicator switches intermittently while the lock is unlocked.

The vehicle's structure remains on for one minute while there is an inactive lock in order to avoid visual disturbance, but the indicator will remain on continuously.

If all the locks are locked, the electronic screen remains off.

Small size, easy to install on a visible place of the cabin.
