

“MCCB”- Modular Crowd Control Barrier

- **Selected by the Israeli Police**
- **Vandalic Proof**
- **Crowd Counter-lever**

Crowd Barrier for Crowd Blocking & Routing, Creating Isolating Areas for Public Safety.

The Modular Crowd Control Barrier (MCCB) is unique (patented) mechanism for High Pressure Resistance.

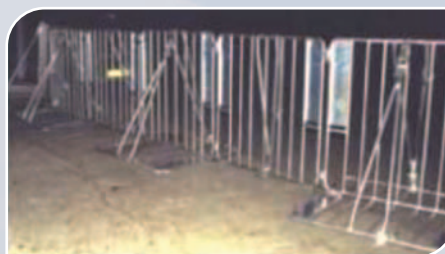

The MCCB is easy to install, dismount, handle, maintain and store.

The MCCB is a modular unit that is designated for law enforcement units and public safety agencies.

The MCCB is based on an innovative concept resulting in a cost-effective highly effective solution.

“MCCB”- Modular Crowd Control Barrier

The concept behind the MCCB is to combine 2 units connected in a “T” shape, thus bringing to use the Crowd's mass as a stabilizing force. This technique enables high resistance.

The unified structure of each unit enables flexibility in assembling the units and easy access due to considerable low weight of each unit. The strengthened narrow structure results in an affordable storage solution, saving space and costs.

The manufacturer's recommendations for assembling the units include two major modes:

Standard (mild) operation mode:

In this mode the units are installed on the surface connected "side by side". The unit is supported by a lever which is stabilized in an angle to the main frame.

This mode is used when no violent crowd activity is expected, for routing purposes, safety hazards access prevention, obstacles marking etc.

Heavy duty operation mode:

In this mode the unit line is as in the standard mode ("side by side") but strengthened with horizontal units, placed under the side-by-side vertical units' line.

This “T” shape barrier enables high resistant blocking capability using the mass of the crowd as a stabilizing force for the barrier.

Advantages of the MCCB:

- Light-weight easy to handle.
- Cost-effective storage and transportation solution.
- Affordable price.
- Rigid - designed to withstand rough environmental conditions and crowd pressure.

Accessories:

Specially design trailer designated to transport 50-150 units, as per client request.
