

MOROCCAN AEROSPACE INDUSTRY

THE MOST COMPETITIVE BASE AT THE GATE OF EUROPE

A SUCCESS STORY

The history of Moroccan Aerospace industry dates back to the 1950's with expertise being developed in the field of aircraft maintenance for civil and military aviation. In 1951, today Airbus created Maroc Aviation subsidiary, operating at this time in the military business with Morocco, and became in 1993 a Sogerma plant developing new activities in the manufacturing of seats, harnesses and metallic assembly of parts. The creation of Royal Air Maroc in 1957, considered today among the major regional airline companies in Africa, has fostered the trend of developing MRO capabilities for its own fleet. In 1999, Royal Air Maroc and Snecma Safran Group create a Joint Venture – SMES - for engine maintenance and repair, which confirmed Morocco's capacity to develop know-how in this field, with qualified and certified technicians. This first plant of Safran Group in Morocco was just a start to the Group's development in the Kingdom, with 7 subsidiaries today employing around 3000 people: Aircelle, Labinal, Morpho, Safran Engineering Services, Matis (JV of Boeing & Labinal) Sagem and Snecma. Snecma Morocco attracted the first "typical" French SME operating in precision machining called Le Piston Français (SERMP), which is today a leader in precision machining field with merely 200 employees.

Since then, more and more companies started setting up their business in Morocco. From 2000 to 2015, more than 110 companies operating in aerospace industry established themselves in Morocco, employing 11 000 qualified employees. The trend was fostered with a dedicated industrial zone, The Aeropole - next to Casablanca International Airport which belongs to ONDA - the National Airports Organization. The availability of land for companies, and relatively at affordable price, was key to the attractiveness of Morocco for foreign investors. During this period of time, Safran Group played a key role in the booming of aerospace industry in the country because it set up a business in major fields of aerospace industry, helping to the development of a diversified and more integrated supply chain and attracting Tier 2 and Tier 3 suppliers.

Other major actors have played a key role in the development of the supply chain besides Safran Group and Sogerma. Tier 1 suppliers such as DAHER, Zodiac Aerospace, Thales, Esterline, and more recently Bombardier, Stelia, United Technologies UTAS - RFM, Eaton, Alcoa Fastening Systems and well referenced SME's in aerospace industry have consolidated even more the aerospace industry.

THE CHAIRMAN'S WORD

Hamid Benbrahim El-Andalousi
GIMAS Chairman

Among the main reasons that position Morocco among the most competitive aerospace industries is the proximity to Europe, only 14 Kms from Spain, which in logistic terms means 2 days by truck from Casablanca to Toulouse and only one day to Spain, 2-3 hours by flight to major capitals in Europe with a well-developed air hub in Med V International Airport of Casablanca. The political stability of this 4 centuries-old monarchy and the history that links Morocco to Europe, along with its demography composed in majority of youth, are other factors that motivate the investor's decision.

In the mid 2000's, regarding the potential Morocco represents for investors in the industrial field, the Government launched the National Pact for Industrial Emergence, erecting aerospace industry among the "Global Industries" to develop along with the automotive, electronic, and IPO/BPO sectors. It comprises a set of incentives and major structural projects to support the development of the industry. With the set of incentives offered to investors by the Moroccan government, the supply chain enriched with OEM's, Tier 1 and 2 suppliers, the proximity to Europe, Morocco is clearly becoming the ideal place to develop business for long-term competitiveness and growth.

Incentives for investors :

- Financial subsidy equal to 15% of total investment (with conditions on number of employees and investment size), can reach up to 30% under specific conditions.
- Financial contribution for training costs: 6000 Euros per engineer and 2000 Euros per technician
- Corporate tax exemption for 5 years – 17.5% afterwards
- For Free Zone Areas: tax free for 5 years and 8.75% afterwards, with exemption on custom duties
- Exemption from VAT for import of new equipment during the first two years of creation
- A set of measure to support the growth of SME's in technological investments

Structural Projects

The projects that are intended to support the growth of the "Global Industries" are a training center for technicians and an offshore industrial area for each industry. For the aerospace sector, the main projects are IMA – the Moroccan Aerospace Institute, the dedicated training-education center. Midparc, adjacent to IMA and the Aeropole, is the Free Zone 'Integrated Industrial Platform' located near Mohamed V Airport in Nouasser-Casablanca. It extends over 140 hectares and has capacity of 330 plants, dedicated to aerospace industry, defense, security, on board electronics, and high tech industries. Its objective is to support companies in their International growth at the best cost and in the best conditions of competitiveness, quality and efficiency. Midparc has been inaugurated on September 2013 and already hosts Bombardier Aerospace, Eaton, Aerolia Airbus, and Alcoa Fastening Systems, along with other SME's. Aeropole ONDA is also an attractive industrial zone where major companies are located, with available land inside major airports which can host MRO companies and other related industries.

Upcoming events

Casablanca Aerospace Meeting, 6,7 October 2015 – every two years.
www.bcjaerospace.com/casablanca/

Marrakech Airshow: 27-30 April, 2016 – every two years.

MOROCCAN AEROSPACE INDUSTRIES ASSOCIATION

In less than one decade morocco, has been able to establish the most competitive aerospace base at the gates of Europe. The global environment of the aerospace industry today offers unprecedented and strategic opportunities for Morocco with the following targets:

Double the size of the aerospace industry within the coming 10 years,

Attract other major companies and boost up the added value

Confirm its position as the most competitive base at the gates of Europe

MISSIONS OF GIMAS

Consolidate and reinforce Morocco's aerospace industry competitiveness and contribute to its global exposure.

Federate, represent and defend Moroccan companies' interests on public and private, national and international spheres.

Represent its members in national and international airshows – Le Bourget, Farnborough, Aerospace Meetings Casablanca, etc.

Meet the industry's needs in trained work force with the development of IMA Moroccan Aerospace Institute.

Integrate Research & Development in the national aerospace strategy through partnerships with universities and research centers.

THE AEROSPACE INDUSTRY IN MOROCCO

10 YEARS
110 COMPANIES
11 000 EMPLOYEES
1 B\$ EXPORT REVENU

17% AVERAGE ANNUAL GROWTH

IMA - THE MOROCCAN AEROSPACE INSTITUTE

IMA - The Moroccan Aerospace Institute is a leading-edge training-education center whose goal is to sustain and grow the aerospace industry through education and training of the workforce. It aims at covering the need of companies in qualified labor force, ensuring a dual apprenticeship system for operators and technicians as well as specific continuous training for middle-managers.

IMA offers a flexible training system that adequately fits the needs of companies and accompanies them from the selection process of candidates to their final skill qualification.

IMA uses governmental subsidies to support the costs of training.

CAPACITY : 1000 TRAINEES per year

www.imacasablanca.com

OPERATORS/TECHNICIANS INITIAL TRAINING

CNC MACHINING OPERATOR
SHEET METAL WORKER
FITTING & ASSEMBLY AIRFRAME OPERATOR
COMPOSITE OPERATOR
HARNESS WIRING OPERATOR

DURATION: 6 TO 9 MONTHS

Other courses

Fitting, Assembly and Finishing of Composite Material.
Painting, Surface treatment
Sheet Metal basics

Continuous training

Mentoring
Proximity Manager
Meeting facilitator
Team leadership
Industrial organisation
Team facilitator
Communication in teamwork

A SUCCESSFUL MODEL OF PARTNERSHIP

The Moroccan Government: building and equipment of IMA

GIMAS - The Moroccan Aerospace Industries Association: Monitoring, management and development of IMA

UIMM - Union des Industries des Métiers de la Métallurgie: Conception, engineering and implementation of the training program

MISSIONS OF IMA

Sustain and grow the aerospace industry through training and education

Cover the needs of companies in qualified labor on a regular basis

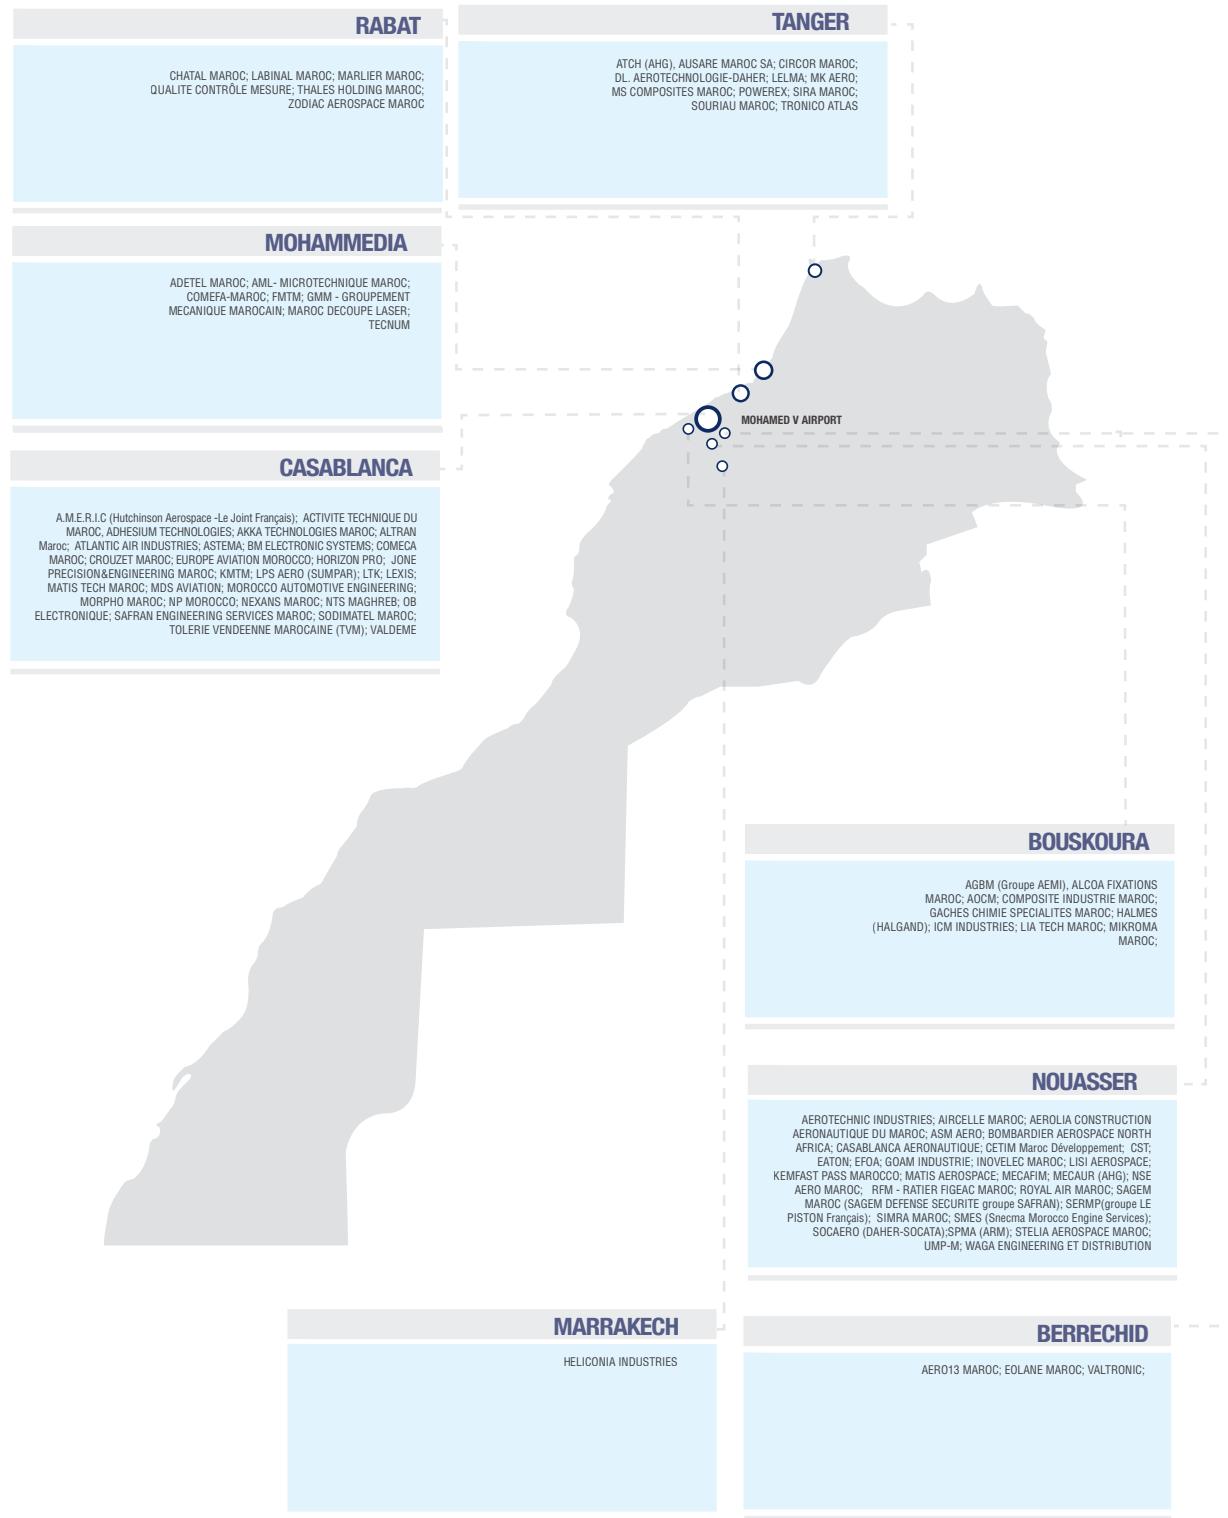

Offer a flexible training program that adequately fits the needs of companies

Develop partnerships with schools and universities around specific programs or projects

Support the companies in the selection process till the qualification of their employees

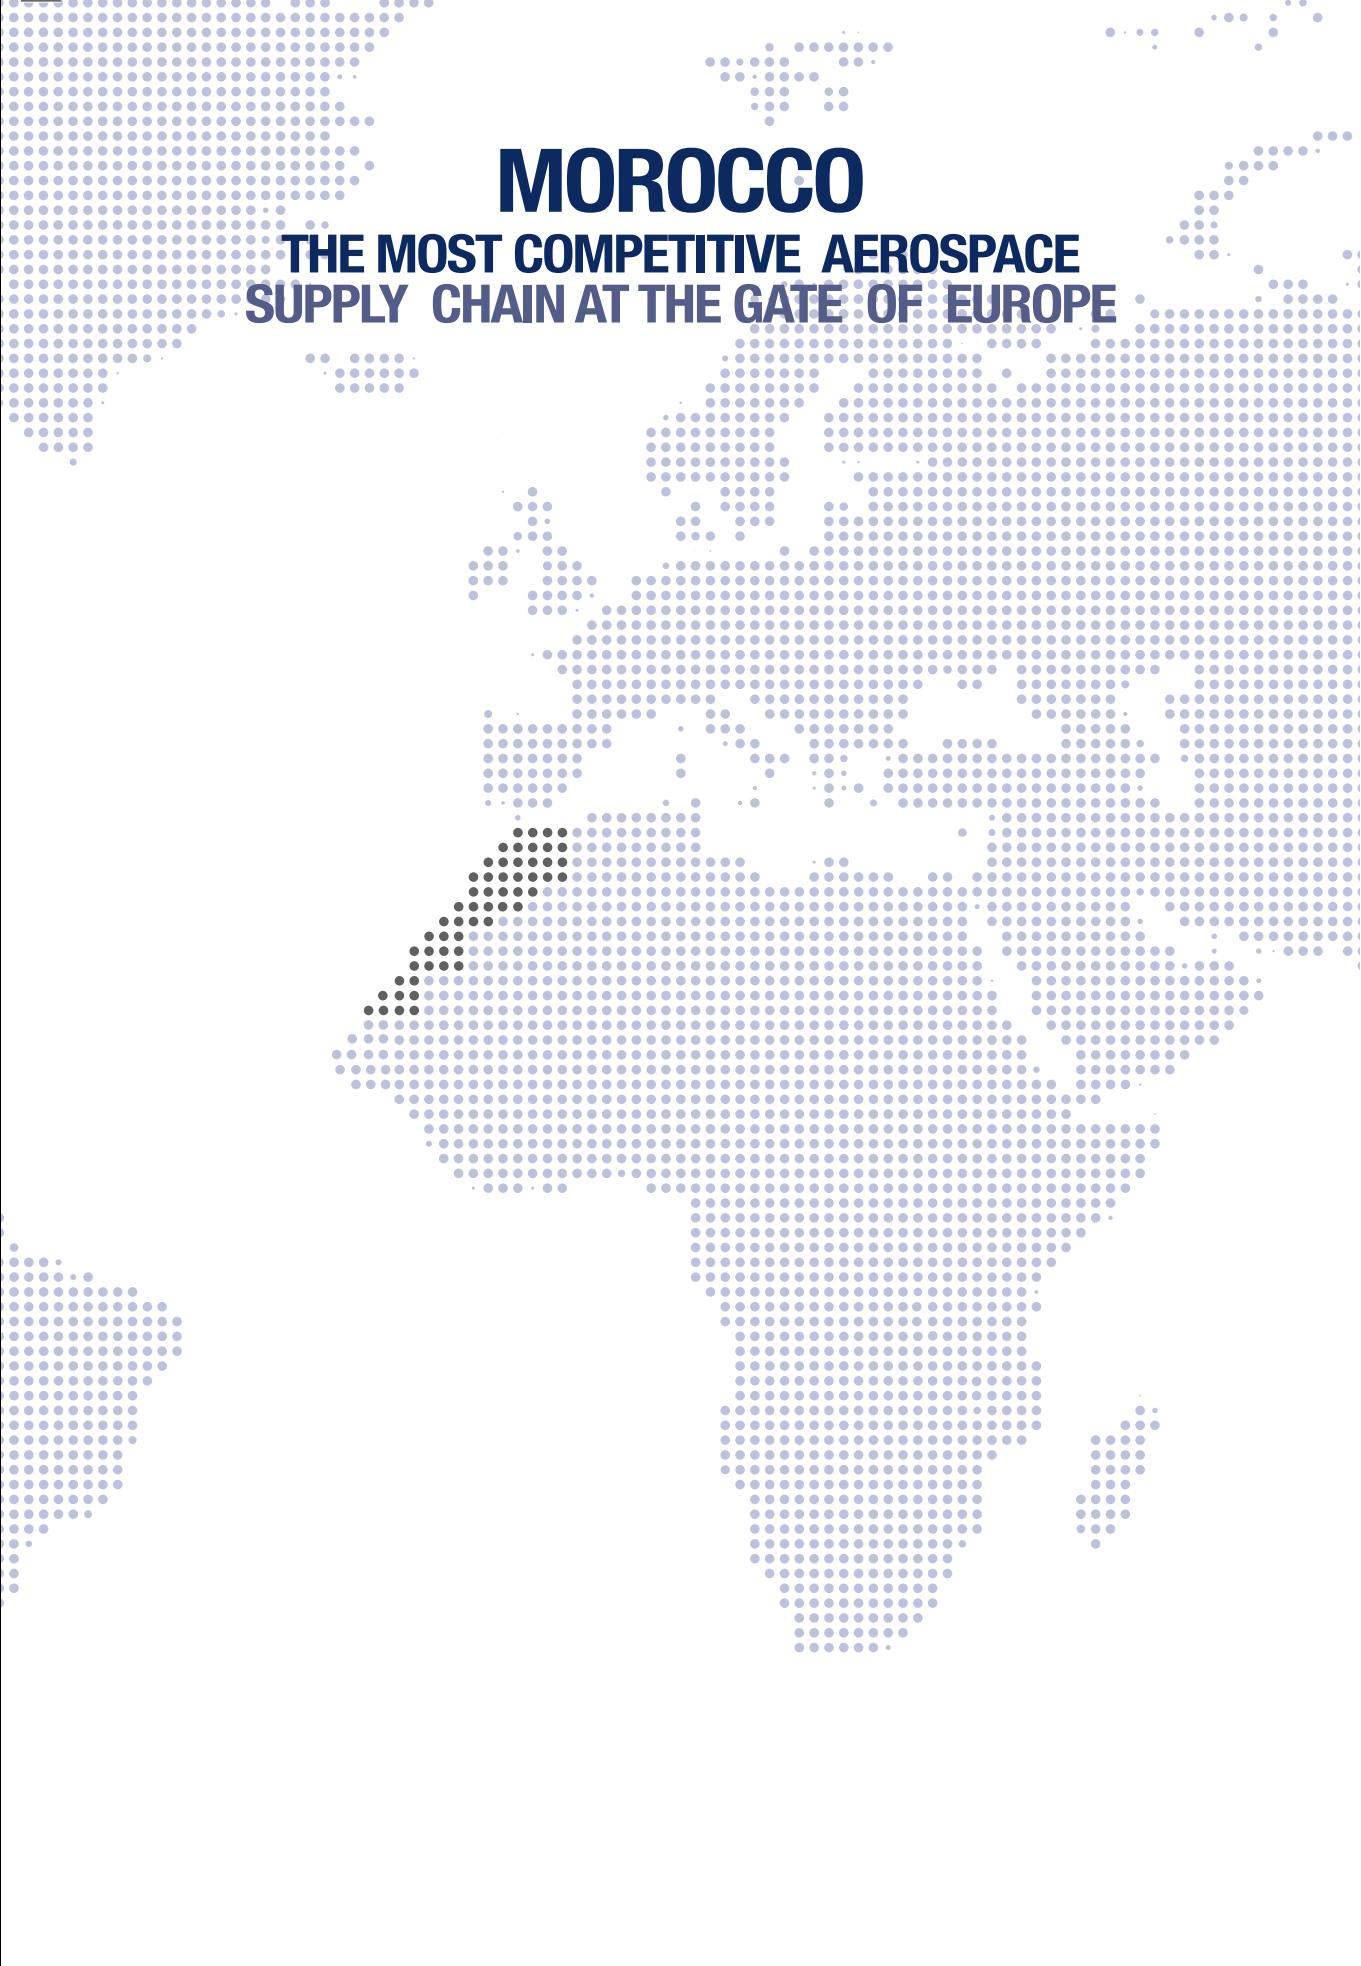

SITE LOCATION

MOROCCO

THE MOST COMPETITIVE AEROSPACE SUPPLY CHAIN AT THE GATE OF EUROPE
